Continuation of 3. NOTE: Claims 1-3, fails to comply with the written description requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Response to arguments:

Applicants argues that the language "the correction offset signals are independent to gains of the amplifiers" of the claim is supported by the originally filed specification, and such support is found in paragraphs [0039] and [0042].

The Examiner cannot concur with the Applicant because, the specification shall contain a written description of the invention, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same.

The examiner cannot readily ascertain/map with the above claim language where in the specification as originally filed, a disclosure/support is found in the Descriptive Portion of the Specification, and/or the asserted portion by Applicant, by Reference to the Drawings, designating the part or parts therein to which the term "the correction offset signals are Independent to gains of the amplifiers" applies.

Continuation of 11. does NOT place the application in condition for allowance because:

#### Response to argumets:

Applicant argues that Bradshaw et al. does not teach or suggest, "the correction offset signals are Independent to gains of the amplifiers". The Examiner cannot concur because, during patent examination, the claims are given the Broadest Reasonable interpretation consistent with the specification. See In re Morris, 127 F.3d 1048, 44 USPQ2d 1023 (Fed. Cir. 1997)

As acknowledged by the Applicant, Bradshaw et al. teaches that the offset is separately and INDEPENDENTLY adjusted even though the gain is varied, by a different construction. Bradshaw et al. performs an offset adjustment separately after finishing performing the gain setting of the amplifiers, which are executed independently and not at the same time, by an independent execution.

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., "a correction offset signal with a fixed value is previously added to the input f the amplifier") are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993)...
